

**\$30K saved in
three calls at
niche SEO tool**

**Revising the product direction
to avoid a clear dead end. In a rush.**

Context

SEOMonitor is an analytics platform for 2000 UK & US agencies. Each of them tracks tens of thousands keywords.

In 2023, the team focused on the new product for AI Content Writing. Team needed to deliver it fast.

Challenge

In a rush, CEO drafted a product direction and requested to build it with no questions. It was a path to dead-end.

Redundancy

Despite the simple product idea, the direction was counter-intuitive, hard to implement, and scale.

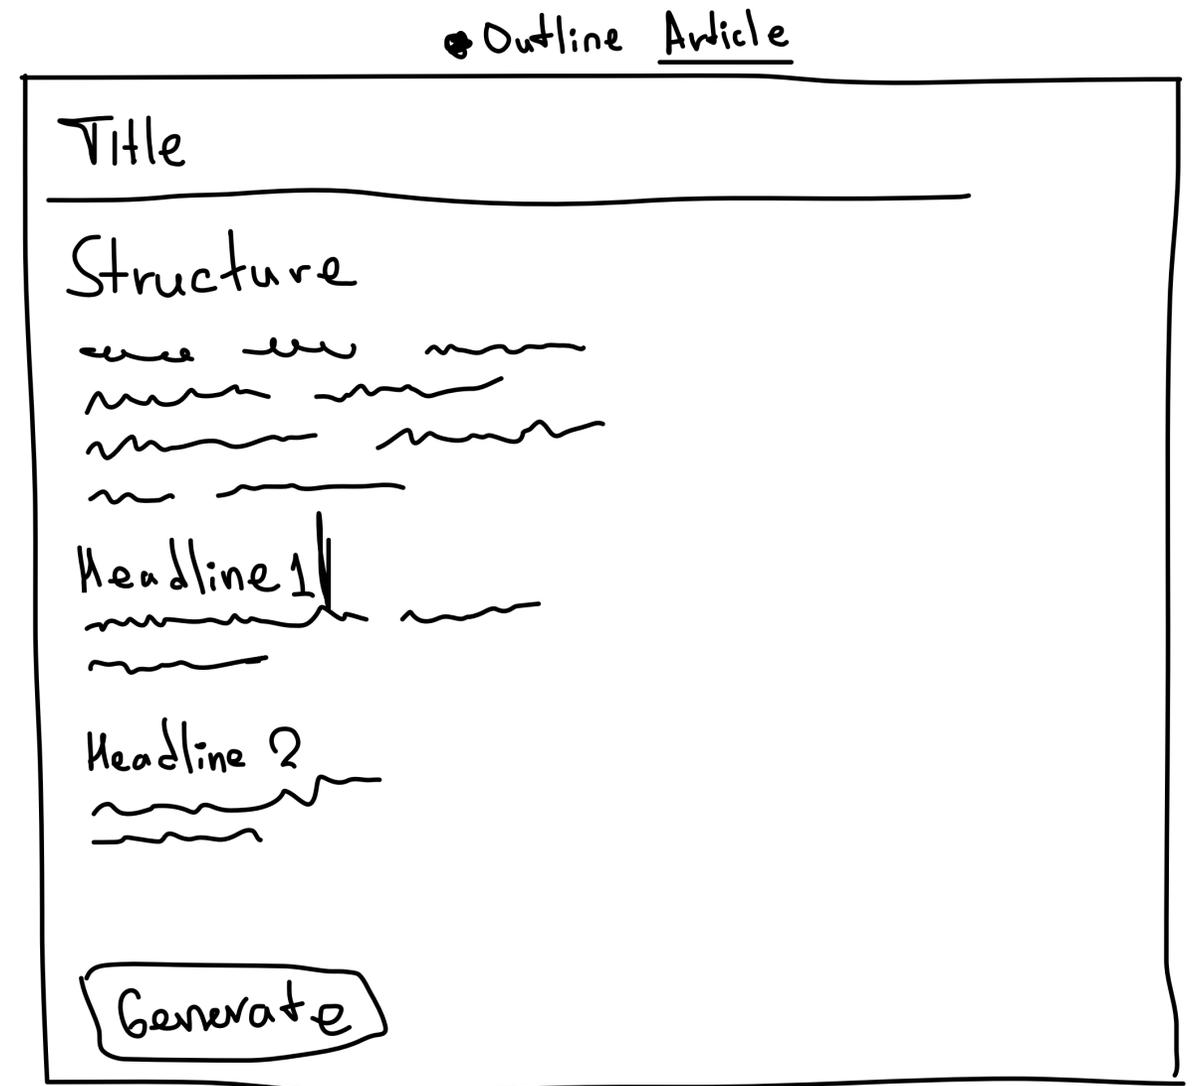

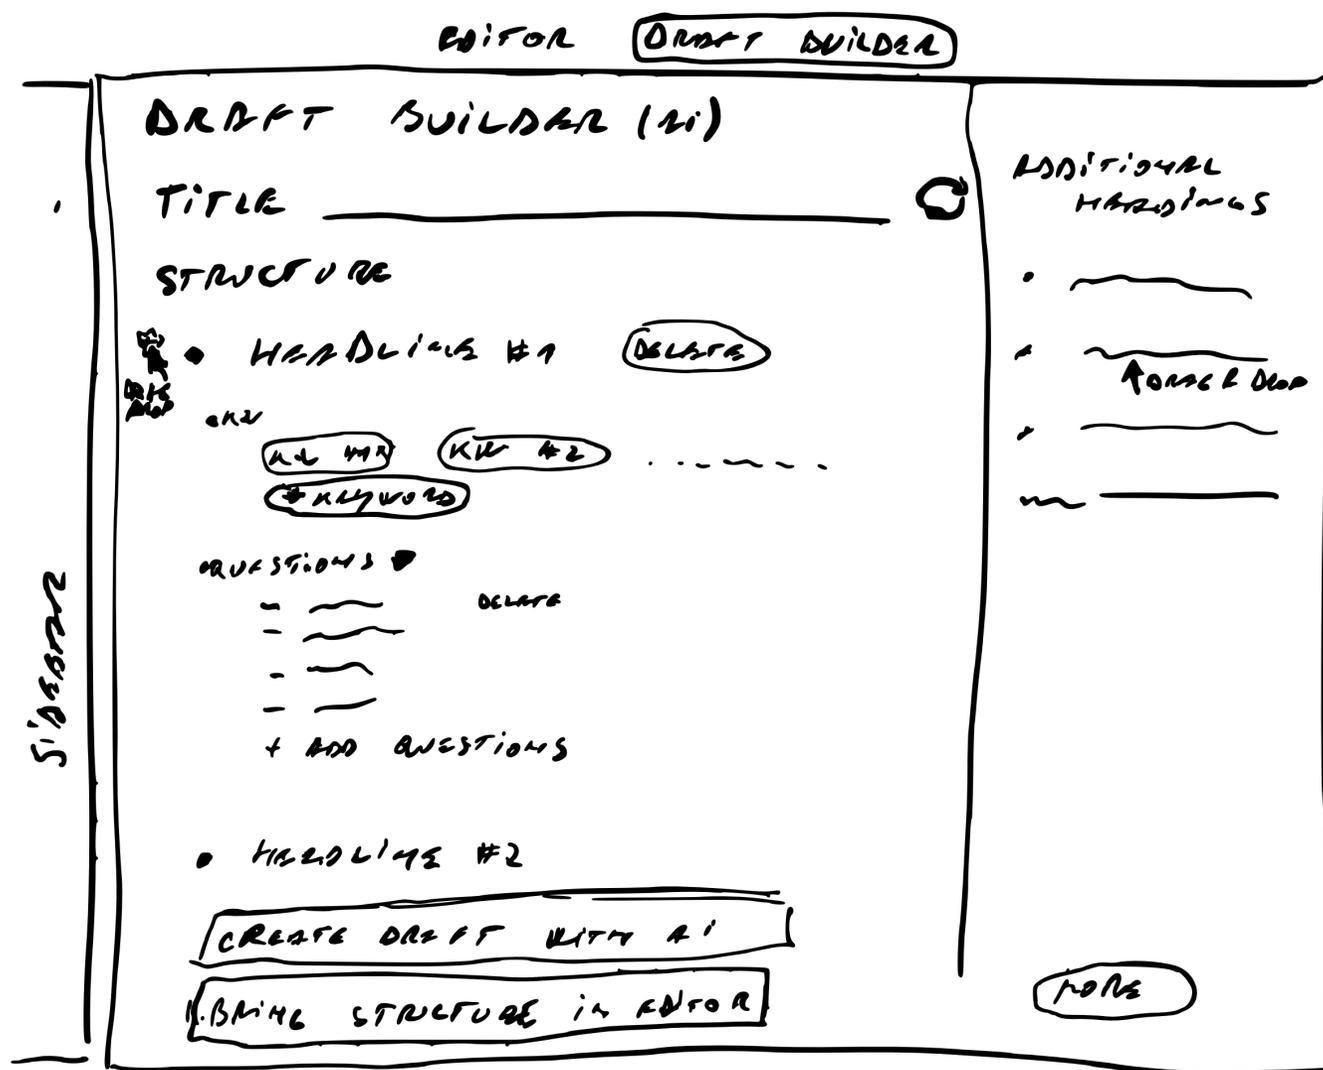

Rush mode

Designers knew that direction was destructive, but were frustrated by the fact that there is no room for discussion.

First call

I explained designers that it's our responsibility to signal the concern, even if there's no room for it.

We audit the direction and drafted the simpler one.

Proposed direction

User edits the AI-article structure through buttons, selects, and drag-n-drop blocks. It was hard to prototype, implement, user, and explain.

Our direction

User edits the AI-article structure in the same way as everywhere: through text editor. It was simple, intuitive, and we had all the components in place.

Didn't work.

**Blocked by the
rush mode.**

**Designer talked to a manager, but it
didn't have any effect on the direction.**

Second call

**We decided to escalate problem again,
but shape it differently.**

**Instead, we signalled that rush mode
burns thousands of euros.**

Communication problem

If we want to deliver good results in a rush mode, we need a different process for communication. Right now the product is in a big risk, and we can't align on this fact.

Product risk

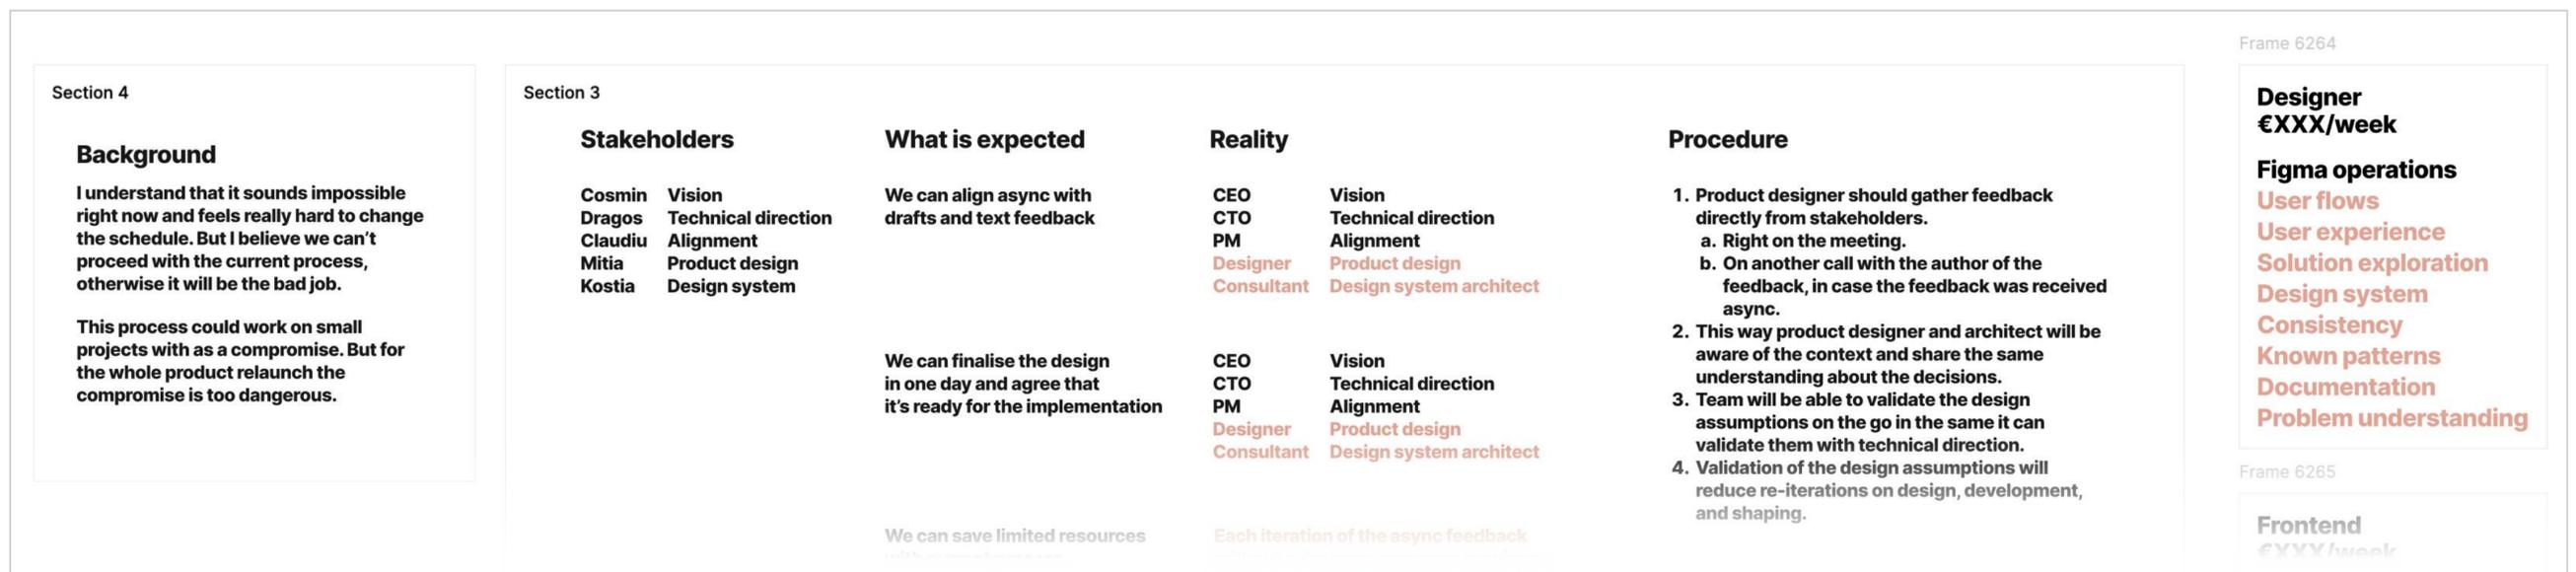

With the current direction, team risks to spend over 30K euros to deliver the first version, roll-out the release, and build it again.

Proposed process.

Product designer should be part of the initial product direction discussions, even if team is in a rush. Same rule works for the major design solutions.

Benefit

This way design team understands the problems and ensures that direction doesn't lead to the dead-end.

Worked out.

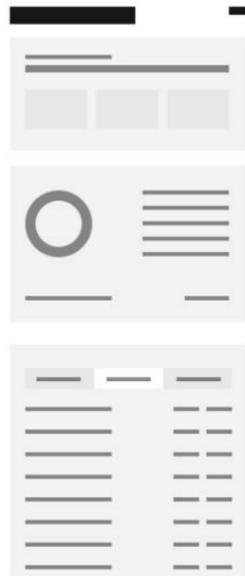

**CEO agreed to
have the call.**

**We also agreed to expand this process
on the other projects.**

Third call.

Together with designers and management we tested each possible direction on a wireframes.

The goal was to end the call in a full alignment on the vision.

Pros

We have additional control on the use input and format.
Works separately from the WYSIWYG
Seamlessly replaces the existing flow

Cons

User needs to have additional mental model for the interface. Form looks complex.
We need to introduce additional components: keyword pills (?), draggable headings, questions (additional/deletion), layouts. Affects design, implementation and testing.

Critical

Modality of the interface requires constant switch between draft builder and actual content.
We can't see how come up with a solution for iteration history of user + AI editing. It's not the easiest one.

Pros

We use same mental modal that user already knows from many places: gdocs, word, etc.
No modality or additional steps.
We don't touch WYSIWYG on design, development and testing. Less components.
Easy to transform to promo materials in case GPT takes more time and we want early launch.
History out of the box.
Limitless possibilities for inputs.

Cons

User need to manually copy and paste the GPT outputs.
Need to double check the way GPT works, is the CHAT even possible?
Long chat messages are hard to read.

Pros

We use same mental modal that user already knows from many places: gdocs, word, etc.
No modality or additional steps.
Less components.

Cons

We don't know how WYSIWIG editor works and the scope of its implementation
We will need to come up with a solution for iteration history of user + AI editing. It's not the easiest one.

Aligned on the problem

To ensure that we tackle same issue.

Clarified the initial solution

Otherwise we can't compare the options.

Discussed the options

Go through pros and cons of each one.

Made the final bet

Choose the best option and tweak it a bit to align.

Aligned!

**We went with the
simple direction.**

**With a full alignment we easily moved
to the high-fidelity stage.**

Unraveling the Power of Long-Tail Keywords in SEO

In the intricate world of Search Engine Optimization (SEO), the prominence of long-tail keywords has become a focal point for digital marketers and website owners alike. Understanding their significance and leveraging their potential can significantly impact the visibility and success of online content.

What Are Long-Tail Keywords?

In the realm of SEO, long-tail keywords refer to more specific and extended keyword phrases that target a narrower audience compared to their shorter, more generic counterparts. They are characterized by their length, often comprising three or more words, and exhibit a closer alignment with the particular queries users search for online. Long-tail keywords encompass phrases that may not boast high search volumes individually but collectively represent a substantial portion of overall searches. For instance, "best running shoes for flat feet" or "digital marketing strategies for small businesses" exemplify the essence of long-tail keywords.

Long-tail keywords differentiate themselves from short-tail keywords, also known as head keywords, primarily by their specificity, targeting a more refined audience with precise search intent. While short-tail keywords encompass broader terms, long-tail keywords narrow down the search focus, catering to users with specific needs or inquiries

The Significance of Long-Tail Keywords in SEO

Long-tail keywords play a pivotal role in enhancing targeting precision within SEO strategies. By focusing on these specific phrases, content creators and marketers can reach audiences with clearer intentions, leading to more relevant traffic and engagement. Unlike broader, competitive terms that often face

Good coffee vs bad coffee: Understanding the difference

The essential characteristics of good coffee

Keywords for SEO: good coffee bad coffee, bad coffee, coffee

Guiding questions: What are the key factors that distinguish good coffee from bad coffee?

How to identify and avoid common coffee mistakes

Keywords for SEO: bad coffee, crappy coffee, good coffee

Guiding questions: What are the most frequent errors that people make when brewing coffee?

Q Keyword	Volume	Presence	
Title optimization	302K	100%	
good coffee bad coffee	302K	T	
Headings & Coverage	542K	55%	94%
coffee beans	170K	H	C
coffee grinder	91K	H	C
pour-over coffee	41K	H	C
specialty coffee	33K	H	C
cold brew coffee	27K	H	C

After months of improvements, the direction still works perfectly.

Results

We successfully prevented the dead-end product direction that could've cost around \$30K.

Product is successfully launched. The direction still works perfectly, and team learned the way to work in rush.

Special thanks to Mitia Morovov-Sheiner, Claudiu Stancu, Dragos Stanciu, and Cosmin Negrescu.
